PROFESSIONAL SUMMARY

B.E. Computer Science Engineering student seeking a Data Analyst, Business Intelligence or Risk/Fraud Analytics internship in Dubai from January 2027. Built a fraud detection pipeline on 590,540 card transactions (IEEE-CIS) in Python and Scikit-learn, plus three projects using MySQL, Excel KPI dashboards and Python ETL. Skilled at taking data from cleaning and EDA through to KPI reporting.

TECHNICAL SKILLS

SQL & Databases: SQL, MySQL, Aggregations, GROUP BY, Window Functions, Date Functions, Data Modeling, KPI Analysis

Analytics & Programming: Python (Pandas, NumPy, Matplotlib, Seaborn), Exploratory Data Analysis (EDA), Data Cleaning, Data Quality, ETL, Statistical Analysis

BI & Reporting: Microsoft Excel (PivotTables, Slicers, Conditional Formatting), KPI Reporting, Dashboard Development, Data Visualization

Machine Learning & Risk: Fraud Detection, Scikit-learn, Logistic Regression, Random Forest, Feature Engineering, Model Evaluation (Precision, Recall, F1-score, ROC-AUC), Confusion Matrix Analysis

Tools: Jupyter Notebook, Git, GitHub, Joblib

PROJECTS

Retail Banking Fraud & Risk Analytics Platform | *Python, Scikit-learn, Pandas, NumPy* **2026**

- Engineered an end-to-end fraud detection pipeline on the IEEE-CIS card-transaction dataset (**590,540 records, 429 features**): cleaned data, reduced memory usage and built features across transaction and identity tables.
- Identified high-risk fraud indicators across transaction amount, card network, email domain and device signals through EDA, which could inform transaction-monitoring rules.
- Evaluated **Logistic Regression and Random Forest** on Precision, Recall, F1-score and ROC-AUC to weigh fraud capture against false alerts; Random Forest achieved the strongest fraud recall. Documented feature importance and confusion matrix results on GitHub.

Netflix Content Intelligence — SQL & Data Modeling | *MySQL, SQL* **2026**

- Analyzed **8,800+ titles** in MySQL using **20 SQL queries** (aggregations, GROUP BY, window functions, date functions) to evaluate content by country, genre and rating.
- Identified that the top 3 content-producing countries account for **~55% of the catalog**; documented all queries and findings on GitHub.

Hospital ER Operations Dashboard | *Microsoft Excel, PivotTables, Slicers* **2026**

- Designed an interactive Excel dashboard with **7 KPI cards** (patient volume, wait time, satisfaction, admission status, referrals) using PivotTables and slicers for multi-dimensional filtering.
- Applied conditional formatting to flag wait-time and satisfaction thresholds; identified that **3 specialty departments** accounted for the majority of patient volume, an insight relevant to resource allocation.

Academic Performance Analytics — ETL & EDA | *Python, Pandas, SQL, Excel* **2026**

- Automated a Python ETL pipeline that improved data quality across **300+ student records** (**~90% null-value reduction**), supporting KPI reporting, and wrote **10+ SQL queries** for cohort-level reporting.
- Identified a **15–20% score gap** between high- and low-attendance students through EDA.
- Built an Excel dashboard tracking **5 KPIs**: pass rate, average marks, attendance, subject performance and grade distribution.

CERTIFICATIONS & VIRTUAL JOB SIMULATIONS

Deloitte Data Analytics Job Simulation (Virtual, via Forage) **Oct 2025**

- Completed practical tasks in Data Analysis and Forensic Technology.

One Million Prompters — Dubai Future Foundation

- Completed the Dubai Centre for Artificial Intelligence initiative on prompt engineering.

EDUCATION

B.E. Computer Science Engineering **Expected 2028**
Chandigarh University, India
